DETAILED ACTION

Allowable Subject Matter

Claims 1, 2, 5-7, 10-18, and 21 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for controlling access to computer information accessible to a computer system. Each of the independent claims identify the uniquely distinct features of "a multipurpose authorized user identification device providing physical access to a premises and access to a computer system on the premises; a non-line-of-sight proximity range actuated identification signal detection circuit for receiving a wireless identification signal from the identification device, and granting and maintaining access to computer information accessible by the computer system if it is determined that the user as indicated by the wireless identification signal is authorized access and remains in the proximity range, wherein the granting access to computer information accessible by the computer system includes placing the computer system in a higher power state from the lower power state." The closest prior arts, Poisner (US patent 6,108,785) and de la Huerga (US patent 5,960,085), disclose conventional systems for controlling access to computer resources fail to anticipate or render the above underlined section obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
